ADDITIONAL INFORMATION

'Primary Patrolling Area'

- 'Beach segment': sandbar, and adjacent inshore holes and rip currents (approx 400m)
- Highest level of service provision; constant supervision;
- Use of red and yellow flags;
- Proactive engagement with beach and water users, and focus on preventative actions e.g. reduce the likelihood and severity of incidents;
- Identify persons in difficulty and respond immediately using a rescue tube or rescue board; response using an inflatable rescue boat or rescue watercraft as required.

'Secondary Patrolling Areas'

- Additional 'segments' either side of the 'Primary Patrolling Area' (200-300m either side). These 'segments' may include beach, rock shelf, headlands etc.;
- Moderate level of service provision; regular 'surveillance';
- Roving surveillance using an all-terrain vehicle, inflatable rescue boat, and/or rescue watercraft e.g. once every 30-60 minutes;
- Proactive engagement with beach and water users, and a focus on preventative actions during roving surveillance;
- Identification and response using an all-terrain vehicle and rescue tube and/or rescue board, or an inflatable rescue boat or rescue watercraft.

'Emergency Response Areas' – Not Visually Represented

- Lowest level of service; response to incidents outside Primary and Secondary Patrolling Areas;
- Areas north and south that the service can respond to immediately to potentially affect a successful rescue e.g. within 10 minutes via all-terrain vehicle, inflatable rescue boat and/or rescue watercraft;
- Response alongside other services is likely in these areas;
- Services could be tasked beyond these areas e.g. more than 10 minutes, but a positive outcome may be less likely;
- Clubs and Branches should identify these areas within their Patrol Operations Manuals and Emergency Tasking Procedures.
